Book

The screenshot displays the ClinicalKey website interface. At the top, the browser address bar shows the URL: <https://www.clinicalkey.com/#/ContentPlayerCtrl/doPlayContent/3-s2.0-B978044306752550003X/>. The page features a navigation bar with links for 'media', 'CME', 'Register', and 'Login'. Below this, there are two main sections highlighted with orange boxes:

- 1. 兩種形式選擇：Table of Contents** (Two form choices: Table of Contents)
- 2. Tools：作者資訊、參考資料、圖片、相關影片** (Tools: Author information, reference materials, images, related videos)

The left sidebar contains a 'Table of Contents' dropdown menu with options for 'This Chapter' and 'Entire Book'. The main content area displays the book title 'THE HIV VIRION: NATURAL HISTORY AND RESPONSE TO HIV INFECTION' and a list of chapters:

- Chapter 1 Establishing the Diagnosis of HIV Infection
- Chapter 2 Primary Care in Developed Countries
- Chapter 3 Antiretroviral Therapy and Comprehensive HIV Care in Resource-Limited Settings
- Chapter 4 Strategic Use of Antiretroviral Therapy
- Chapter 5 Zidovudine
- Chapter 6 Didanosine
- Chapter 7 Zalcitabine
- Chapter 8 Stavudine
- Chapter 9 Lamivudine

The right sidebar contains a 'Tools' section with 'Author Information' and 'References (214)'. The 'Author Information' section lists the editor, Raphael Dolin MD, and his affiliation with Harvard Medical School. The 'References' section lists the number of references (214) and provides links to 'Figures (9)' and 'Related Videos'.

The bottom of the page shows a footer with the text 'Copyright ©2013 Elsevier, Inc. All rights reserved.' and a 'Smarter Search. Faster answers.' slogan.

• Reduce plasma Pi by inducing phosphaturia

• Decrease plasma 1,25 VD₃ by inhibiting synthesis and promoting metabolism

• Maintain Ca balance by preventing renal Ca loss

Physiologic roles of Klotho on solute channels and transporters and vitamin D metabolism in the kidney. Klotho is expressed prominently in distal convoluted tubules, and less in proximal convoluted tubules. In proximal convoluted tubules, membrane Klotho at the basolateral side functions as a co-receptor of FGFRs and drives FGF23 signal transduction to inhibit NaPi cotransporters (NaPi: 2a/c and Pit2) and to suppress cyp27β1 encoding for 1-hydroxylase, and to stimulate cyp24α1 encoding for 24-hydroxylase. The role of Klotho in the cytoplasm of renal tubules is unclear. Whether membrane Klotho at the luminal side inhibits NaPi cotransporters (2a/c and Pit2) in an autocrine mode is not known (dashed line). In distal convoluted tubules, membrane Klotho at the basolateral side functions as a co-receptor of FGFRs to induce FGF23 signal transduction. What intermediate(s) are released from distal convoluted tubules and how intermediate(s) affect proximal convoluted tubules in a paracrine mode is not known. One possible candidate is Klotho release from distal convoluted tubules to act on the PCT. Whether membrane Klotho at the luminal side directly regulates TRPV5 in an autocrine mode is unknown. Soluble Klotho in luminal urine derived from either blood or urine exerts regulatory action on NaPi cotransporters in proximal convoluted tubules, and on TRPV5 in DCT. Dashed line, suspected action.

A report of the Am Coll of Cardiol/American Heart Assoc Task Force on Practice Guidelines (Committee to revise the 1999 guidelines). Bethesda (MD): American College of Cardiology (ACC), American Heart Association (AHA); 2004. 211 p. [1398 references]

Regulatory Alert

FDA Warning/Regulatory Alert

Note from the National Guideline Clearinghouse: This guideline references a drug(s) for which important revised regulatory and/or warning information has been released.

March 1, 2012 – Statins and HIV or Hepatitis C drugs: The U.S. Food and Drug Administration (FDA) notified healthcare professionals of updates to the prescribing information concerning interactions between protease inhibitors and certain statin drugs. Protease inhibitors and statins taken together may raise the blood levels of statins and increase the risk for muscle injury (myopathy). The most serious form of myopathy, called rhabdomyolysis, can damage the kidneys and lead to kidney failure, which can be fatal.

February 28, 2012 – Statin drugs: The U.S. Food and Drug Administration (FDA) has approved important safety label changes for the class of cholesterol-lowering drugs known as statins. The changes include removal of routine monitoring of liver enzymes from drug labels. Information about the potential for generally non-serious and reversible cognitive side effects and reports of increased blood sugar and glycosylated hemoglobin (HbA1c) levels has been added to the statin labels. The lovastatin label has been extensively updated with new contraindications and dose

The screenshot shows a search engine interface with a search bar at the top. Below the search bar, a message indicates that the results are for 'gastric cancer, management, recurrence' and suggests alternative spellings. The results are displayed in a list format, with each item showing a source icon, a title, and a brief description. The first result is from 'Current Surgical Therapy' and discusses SPY angiography. The second result is from MEDLINE and discusses the management of gastric cancer. The third result is also from MEDLINE and discusses the association of family history with cancer recurrence and survival in patients with gastric cancer.

Showing results for **gastric cancer, management, recurrence**. Did you mean [gastric cancer, managements recurrence](#), or [gastric cancer, management recurrence](#) instead?

AJR Am J Roentgenol, 2011-09-01,

The purpose of this study was to prospectively evaluate interobserver agreement on lesion detection and characterization in the review of automated ultrasound images of the breast by five radiologists. From August to October 2009, bilateral whole...

Abstract

Screening ultrasound may depict small, node-negative breast cancers not seen on mammography. To compare the diagnostic yield, defined as the proportion of women with positive screen test results and positive reference standard, and performance of screening with ultrasound plus mammography vs mammography alone in women at elevated risk of breast cancer. From April 2004 to February 2006, 2809 women, with at least heterogeneously dense breast tissue in at least 1 quadrant, were recruited from 21 sites to undergo mammographic and physician-performed ultrasonographic examinations in randomized order by a radiologist masked to the other examination results. Reference standard was defined as a combination of pathology and 12-month follow-up and was available for 2637 (96.8%) of the 2725 eligible participants. Diagnostic yield, sensitivity, specificity, and diagnostic accuracy (assessed by the area under the receiver operating characteristic curve) of combined mammography plus ultrasound vs mammography alone and the positive predictive value of biopsy recommendations for mammography plus ultrasound vs mammography alone. Forty participants (41 breasts) were diagnosed with cancer: 8 suspicious on both ultrasound and mammography, 12 on ultrasound alone, 12 on mammography alone, and 8 participants (9 breasts) on neither. The diagnostic yield for mammography was 7.6 per 1000 women screened (20 of 2637) and increased to 11.8 per 1000 (31 of 2637) for combined mammography plus ultrasound; the supplemental yield was 4.2 per 1000 women screened (95% confidence interval [CI], 1.1-7.2 per 1000; P = .003 that supplemental yield is 0). The diagnostic accuracy for...
